Building Airflow ETL Pipeline

Create ETL pipeline using ASTRO CLI, in which your task is to integrate daily currency exchange rates to mongodb after transformations.

API details are:

Use **Frankfurter API**, a free public currency exchange-rate API.

Website: https://frankfurter.dev/

API: https://api.frankfurter.dev

One API call is demonstrated as:
https://api.frankfurter.dev/v2/rates?base=EUR&quotes=USD,GBP,JPY

MongoDB and Mongo Express Configuration

For this assignment, you must use MongoDB as the primary database and Mongo Express as its web-based administration interface.

Configure Mongo Express as another Docker service.

Add following meta details to your docker images

a) Docker Networking
b) Persistent Storage

Create Three (3) tasks

a) Extract Currency Exchange Rates
b) Transform Exchange Rate Data
   Transformed data should contain following details:

```
{
  "base_currency": "EUR",
  "target_currency": "USD",
  "exchange_rate": 1.15,
  "rate_date": "2026-11-04",
  "source": "Frankfurter API",
  "retrieved_at": "2026-11-05T07:15:00"
```

}

c) Load Data into MongoDB

You must use Airflow (Named) XCom to transfer data between tasks.

Submission Instructions

a) Create a report containing screenshots of code and outputs.
b) Push the code to GITHUB/DAGSHUB repository and attach the link the report.
